

Dear All Concerned,

This large arena proposal is going to be a huge headache and burden for Inglewood, disturbing families who have a right to peace and quiet in their homes.

Increased traffic is going to offset whatever benefits the arena brings. Rates of asthma and other health issues will rise because of increased pollution. The developers have not held a town hall that I know of, or made any real efforts to reach out to the community and let them know what is going on, and address their concerns. Not one meeting in our community. I guess Mr. Ballmer does not want to meet the community who actually lives here. If this goes forward you can expect health problems for our children and our parents. It's just not right.

Sincerely,

Elena Guadehupe Crow

To the Office of Governor Newsom,

I live in Inglewood and on behalf of myself and my neighbors, we respectfully request that you stop the Clippers' application for a new arena in its tracks unless the applicant agrees to make major changes to its environmental program. The greenhouse gas reductions offered in the application do very little to protect us from climate change. Certain assumptions made in the application – like assuming that when events occur in the Inglewood arena, other venues like Staples Center will only hold small events – are very doubtful and do not live up to the standard set by AB 987. Plus, we still have to deal with emissions from MILLIONS of new cars in our community.

This project is not right for our community and must be denied.

Thank you,

MARIA OLALDE

To Whom it May Concern,

I am a longtime resident of the Inglewood area, and I would prefer the new Clippers arena NOT be built where I live. I do not want to live right next to an arena that will attract a great deal more traffic, increase the amount of pollution, hurt the health of my family, and overall cause harm to my neighborhood. The law requires that the Clippers and Mr. Ballmer stop the unhealthy side effects from millions of cars. The people developing the new Clippers arena aren't doing that and are not thinking about the residents' best interests at all.

Sincerely,

Elea Estrada

To the Office of Governor Newsom,

I am a longtime Inglewood resident. Would you like an arena literally feet from your home? Do you realize they want to build this next to homes and apartments? Parking structures backed up to homes? The Clippers' application currently under review by state officials would be very bad for the people who live here. The project has huge problems – including adding millions of cars to our roads, bad traffic congestion, pollution for our families, and safety concerns. And they are hardly doing anything in our community to reduce pollution from the cars and the arena. The Clippers do not seem to care about building the arena in a way that is okay for our neighborhood.

Thank you for helping us.

Dear State Officials,

I am writing this letter to ask that you reject the Clippers' application. The project clearly does not meet the requirements for AB987. Further, Inglewood is about to endure a lot more traffic once the new NFL stadium opens. Another venue would be the third in just one mile, and very harmful for the quality of life of Inglewood residents. The project will create greenhouse gas emissions and local pollution that our environment and community cannot sustain. Think about this. Over the next years, we will be adding a football stadium and a new development next to the stadium that has millions of square feet of new development. And now they want to build a new arena, adding to the pollution in our neighborhoods affecting our children.

It's time that Inglewood residents stop getting the short end of the stick.

I ask that you reject this application.

Thank you,

Tiffany Jones

All,

I am a concerned member of the Inglewood community. Everyone I talk to who lives here does not want this arena! We have enough problems here without big sports owners tearing this neighborhood apart to build a basketball arena that nobody here wants. We all know that smog and pollution and increased traffic will keep kids from truly being able to live and thrive in their neighborhoods. We know that the jobs supposedly being "brought" here will not be high paying, and we know that there is zero benefit for the residents of this community, only costs. Selling popcorn and hot dogs in exchange for making our families sicker does not seem like a good deal. Please put this arena someplace else.

Best,

Rosalia Arteaga

To Whom It May Concern,

I live in Inglewood. The proposed Clippers' arena would be right next to my home. I am writing to express sincere concern over the project application and to respectfully request that it be denied. Clearly, the project does not live up to its requirements. It will not reduce its impacts on my community. The arena will create millions of new car trips with no ways to reduce the pollution and gridlock. Mr. Ballmer says he wants to build his house in Inglewood. It is a house that will destroy our neighborhood. Mr. Ballmer has billions and he is hurting our families. Why is that okay? The health of our community is at stake!

Please deny this application.

Dear California Office of Planning and Research,

I am writing to you as a concerned citizen and dismayed resident of Inglewood. Building the Clippers arena in my neighborhood is alarming news. It will devastate our community.

I was also disturbed to hear that CARB head Mary Nichols recently told a small group of supporters of the arena that she hopes to have "good news" for them in the near future. Good news for the arena is bad news for Inglewood and residents! Why would anyone think this is good news? CARB's own studies show that smog and pollution correlate to a higher risk of asthma and other related health problems. Please reject AB 987 special treatment for the arena before it goes any further in the planning process.

Thank you.

To the Office of Planning and Research:

I understand that under AB 987, the Air Resources Board is supposed to make sure that the Clippers project reduces its greenhouse gas emissions and that half of the reductions be done locally. I don't understand why the Clippers act as if this is so complicated and difficult. It's actually quite simple. They even include a list of local reduction measures in the law!

I am not a mathematician, but I can add and divide. The application says the Clippers project will generate about 600,000 tons of greenhouse gases. So, the Clippers have to reduce those 600,000 tons, and about half, 300,000 tons, need to come from local programs. Anything short of that needs to be rejected. It sounds very clear to me! Please enforce the law.

Sincerely,

Miguel Arzuaga 323 301 8429

To whom it may concern,

I write to share my outrage over the Clippers application and its slippery slope through environmental review. Inglewood is overwhelmed with development and traffic. The Clippers stand to make millions from the new arena, while the residents will suffer from pollution caused by the project. If this development is allowed to move forward, the owners should be held to the highest standards of pollution reduction so that the community doesn't get hurt.

Also, the local greenhouse gas reductions proposed by the Clippers don't do nearly enough to benefit residents. The measures being proposed are extremely minimal and do little to alleviate health impacts from the thousands of cars that will pour onto our streets.

This is too little too late from the Clippers. The application deserves thoughtful analysis from the leaders that are supposed to protect the residents of Inglewood.

Please do not fast track this application.

Thank you for listening,

Laura Lopez

To whom it may concern,

I am writing to you today about the basketball arena that the Clippers are planning to build in Inglewood (project 2018021056) and their request to fast track environmental review for it. Any project that is granted streamlined approval should be subject to the highest level of scrutiny and I do not think the Clippers have met the necessary requirements. The changes made to their local GHG emissions mitigation programs are not nearly enough to overcome the burden the arena will place on residents of Inglewood. To put it simply, this application does not live up to the law, AB 987.

With the huge increase in traffic that will accompany the new arena, the Clippers need to make a serious commitment to maintaining clean air and a healthy environment in Inglewood. So far they have failed to make this commitment. The measures they have proposed are not nearly enough, which is crazy given the fact they are a very expensive sports team with a billionaire owner. They could be doing a lot more and have chosen not to. I think on these grounds the Clippers request to streamline should be denied.

Thank you for your time.
