

To the Governor's Office--

How many times do the Clippers need to send you a different application for their arena? They are still changing their application. I bet almost no one has any idea what their program is and how it will help us in the community. It is obvious they refuse to follow the law! And it was the law they made. Now it is clear they lied to everyone. The law is simple. Remove all the greenhouse gas you put into the air and make sure that most of it comes from LOCAL reduction programs. I am not a lawyer or scientist but I know what that means. For some reason, the Clippers do not.

Their latest letter is just another problem. Chargers for Teslas and other expensive electric cars? Have they ever been to Inglewood before? And on top of that they don't want the state to check up on them to make sure they are doing what they said they would do. This is suspicious. The arena is a bad idea and so is their application. Please tell them to do better, or tell them to build their arena somewhere else.

Thank you.

Sheillian Ornelas

To the California Air Resources Board:

The LA Clippers' plan for a new basketball arena will hurt this community. That has been true from the start. The Clippers keep making new submissions, but none of them change that basic fact. I hear the arena will bring 4 million new cars to Inglewood every single year, and therefore lots of pollution and traffic. Even if every car is an electric car – and they won't be! – that would still create a nightmare of traffic for us. And in reality, Inglewood does not have very many electric vehicles, and I don't think that giving away chargers is going to change that fact. So, we are still left with an enormous number of cars and very unhealthy pollution, which is what the Air Resources Board is supposed to stop.

Please do your job and stop this arena from being built right next to our homes, businesses, schools and churches.

Thank you very much.

Erika Pineda

To the California Office of Planning and Research:

I oppose the Clippers' application to help their arena project go faster. Their latest letter was ridiculous. How many people do they really think are going to use electric vehicle chargers, and why do they think that would make a real difference when their arena is going to send 4 MILLION MORE CARS to Inglewood each year, leaving us breathing exhaust and fumes that cause asthma and other health problems. A better idea would be for the Clippers to forget about the chargers and instead invest their money to really cut traffic, cut pollution, and help with climate change. If Mr. Ballmer did not have 50 billion dollars I bet you would not even consider this. Please deny this application.

Sincerely,

Darwin Burks

To the Governor's Office of Planning and Research:

If Steve Ballmer and the Clippers think that giving away EV chargers will turn Inglewood into a city of Tesla owners, they have another thing coming. Many of my neighbors rely on public buses because they cannot afford even a regular car. That is a far cry from the extra high price tag of an electric car, even though many of us would like to drive an electric car because they are better for the environment. This idea has nothing to do with the reality of our community. And most electric cars come with a charger. So what is the point? It is just another game by the Clippers to not fulfill their promises.

Another thing. Why do the Clippers want to stop oversight from the state government of their environmental programs? Why offer to go to the state to be verified, and then turn around and say you don't want to do it anymore? It sounds like they are trying to hide something. Please say no to the Clippers' new application. Instead, make sure they do something that actually helps our environment here in Inglewood, and please make them prove they are following through on their word. It's not too much to ask for.

Thank you for listening.

To Gov Newsom's office:

Please deny the Clippers' most recent application for fast environmental review. The impact of climate change is very damaging, and so is the pollution it will bring to our community, but this application does not take it very seriously. Giving away some EV chargers will not convince most people to actually buy and use an EV. Plus, accepting this application would be dangerous for the future because it relies on a far-fetched theory called "market shift" that says other really popular entertainment venues will not get as much use because the Clippers have their own arena. Imagine extending that idea to other projects. If I want to build a new apartment tower, can I say that current apartment buildings will only get partly used? If I want to build a factory, can I say it's not that big a deal because current factories will be used less? Of course not. But that is the logic the Clippers are using. Please keep protecting our environment and say no to the Clippers.

Thank you.

To the Office of Planning and Research:

As an Inglewood community member, I ask that you reject the LA Clippers' latest application for fast track environmental review under AB 987. Do the Clippers really think that we will race out to buy expensive electric vehicles just because someone gave us a free charger? Not a chance. Electric cars are expensive, and it will take a lot more than a free charger to convince me to buy one. Especially because they already come with chargers! Maybe the Clippers' charger would be faster, but as long as the car can charge up overnight it doesn' t really make a difference.

If the Clippers want to actually help us buy an electric vehicle, that would be great. Or even buy 1,000 electric vehicles for our schools, social service providers, or community members. But a charger is not going to cut it. Please ask the Clippers to come back with a plan that actually makes a difference.

Yours truly,

Olivia Moran

Dear Governor,

The Clippers want special treatment for a new basketball arena in Inglewood but my family and I want you to say "no." I have read the materials. The arena will bring 4 million new cars to Inglewood every year. The reports from the Air Resources Board say tailpipe emissions from so many cars is very bad for our health—especially for children and older people. Plus it is already very hard to drive around and park in Inglewood. It will be so much worse when this new arena opens and hosts big events 200 times a year.

The latest idea from the Clippers is to pay for 1,000 chargers for electric vehicles to be used in the area. This is a bad and pointless idea. First of all, the Clippers don't say they need to be in Inglewood, and even if they need to be in Inglewood they would not make a big difference because the chargers are only for new cars, and not many people are buying expensive electric vehicles in Inglewood. We are worried about feeding our families and paying our rent. Most people in the arena neighborhood can't afford to buy a new electric car. Mr. Ballmer does not understand what our lives are really like.

This does nothing to make me less worried about 4 million cars, traffic, noise, and many tons of pollution.

Please help us protect our families. Please stand up for the law and for all of us too.

Sincerely, *Comm Linaves*

To the State of California,

I am writing to ask you not to approve the application for special treatment from the LA Clippers for their arena in Inglewood. They have sent you many application letters, but there are problems with all of them. None of this makes sense. All I know is that the state has studies saying how bad this car pollution will be for our families. And the Clippers want the state to say OK to all this pollution near our homes!

Now, they think that paying for electric vehicle charge cords will help protect the environment and public health. This idea is crazy and does not deserve to be taken seriously for one second.

Please stand up for Inglewood and say NO to this application!

Sincerely,

NOE BASTIDA

To the Office of Planning and Research:

I find it very insulting that the Clippers think they can get out of their deal to protect our environment and support our city by dropping a load of electric vehicle chargers onto our community. Who do they think they are? The team owner should use his billions to come up with ways to actually cut pollution (and lower asthma rates), reduce traffic, and reduce greenhouse gas. Instead, he wants to pay for car chargers that probably will not get used! Inglewood does not have many electric cars, and many of us live in apartments and don't have our own garages anyway. Plus does Ballmer know that electric cars already come with chargers when you buy them?

We would all like it if the Clippers followed the law and stopped trying to distract us with stunts like this. Their owner pays hundreds of millions for his players but does nothing for people he is going to harm with more pollution. Please don't let him do this to us.

Thank you for your help,

Ivan Jimenez

To the California Governor's Office:

The arena that the Clippers want to build will host major events many times every week, which means a huge amount of traffic on our streets and next to our homes. Have you been to Inglewood? Have you seen how much traffic is already here? And how little parking there is? And this is BEFORE the football stadium even opens! Pollution from all of these cars is bad for the air and for our lungs and our health overall. It all sounds like a nightmare for the people who live close by. Have you seen that this arena and parking will be right next to our homes? Offering some electric vehicle chargers will not change this. Turn them down please!

Sincerely,

Diana Cortes

To California OPR:

I am worried about the Clippers' environmental application because they want less enforcement of their environmental promises. In their most recent letter, the Clippers say they do not want the Air Resources Board to make sure they are protecting the environment and residents, like they said they would. If they plan to do everything they are required to do, why would they ask for that? I hope you are not considering agreeing to that. Instead I hope you make sure they are following every rule down to the smallest detail. We need real programs that reduce pollution from the millions of cars. Not fake programs that will do nothing for us. The Air Board has told us this pollution will hurt us and our families. We deserve real improvements.

Thank you.

Rigoberto Uribe 310) 404 8286
RIGOBERTO URIBE
3728104st.

To the CA Air Resources Board:

Please turn down the application for a new basketball arena in Inglewood by the LA Clippers. They are not serious about protecting the environment and public health. They are not serious about meeting the law they asked for. They are not protecting us.

To follow the law, the Clippers need to run programs that reduce air pollution for us. But for some reason they refuse to do that. They offer many programs that are outside of Inglewood or that just won't work. Take shuttles, for instance. They will not help take cars off the road. Not many rich season ticket holders are going to drive to a train station, take a train to a stop that is not close to the arena, then get on a shuttle in heavy traffic. It is not going to happen.

Plus, they say they won't need to totally cut pollution because other big venues like Staples Center and Honda Center won't stay very busy because of their new arena. It doesn't make sense.

The Clippers are trying to fake their compliance with this law on the cheap. Please say NO to the Clippers.

Sincerely,

Juan Seloxsain

Dear Gov. Newsom,

Every time I look, the Clippers are changing their application for a basketball arena. It's very confusing and very frustrating. The latest change: giving away chargers for electric vehicles and calling that a local environmental benefit. That sounds nice but it sounds like you don't know our community. The Clippers clearly do not. There are very few electric cars in our neighborhood. We are working hard just to make ends meet. Buying us a better electric cord for cars we don't have will not help us.

This is supposed to be a "local" environmental measure. It is not. None of it adds up!

Please ask the Clippers to stop changing their application little by little. Please ask them to send one single application that actually follows the law and actually helps the community. Please help us fight all the traffic and dangerous pollution from 4 million new cars every year. This arena and parking structures will be right next to our homes. Who would want that! Ask Mr. Ballmer, one of the world's richest people, to do his part to protect the health and quality of life for Inglewood. Mr. Ballmer says he wants to build his "house" in our community. Well his "house" will have parties 200 days a year and millions of cars. That is not what we need.

Thank you.

Angelina Imperial

310-693-3265

Olga Imperial

3824 104 St.

To the California Office of Planning and Research:

The Clippers think they have a great environmental program for Inglewood: giving away chargers for electric cars. The problem is that people in Inglewood don't drive electric cars! At least, not many. Has Steve Ballmer or any of the Clippers walked around our community? They would understand we are working hard to just to pay our bills.

Since the Clippers want to build an arena in Inglewood, please make them actually help our community and create environmental programs right here in Inglewood. Maybe help us make our homes more efficient so our costs are lower. Maybe they could do something with our schools to lower their electricity costs too. Or get rid of the millions of cars coming to our homes. Please deny their application for fast tracked environmental review until they fulfill the law and actually make a difference for us.

Thank you.
